

Vasundhara Hospital, Ghaziabad

Alzheimer's Disease Medical Report - Follow-Up Assessment

Patient Details:

Name: Mrs. Sunita Sharma
Age/Gender: 69 years / Female
Report Date: 12 / 05 / 2027

Consulting Physician:

Doctor's Name: Dr. A. K. Banerjee
Specialization: Neurology (Cognitive Disorders)
Hospital / Clinic: Vasundhara Hospital, Ghaziabad

Medical History (6-Month Interval Follow-Up):

- Patient re-evaluated after 6 months; family reports accelerated memory loss and increased daily assistance needs.
- Unable to recognize grandchildren's names consistently; frequently misplaces essentials and accuses others of taking them.
- Disorientation expanded to indoor rooms at night; attempted wandering outside front door on two occasions.
- Increased emotional agitation during evenings (sundowning); requires continuous prompting for bathing and dressing.

Physical & Cognitive Examination:

- Blood Pressure: 130/84 mmHg
- Pulse: 76 per minute
- Cognitive Test (MMSE Score): **15 / 30** (Moderate Stage Progression: -6 points drop from 21/30 on 10/11/2026)
 - Orientation: 3 / 10 (Disoriented to date, year, season, and hospital department)
 - Memory: 1 / 6 (Immediate registration 2/3, delayed recall 0/3 after distraction)
 - Attention: 3 / 5 (Unable to complete serial subtractions without repeated cues)
 - Language: 8 / 9 (Mild word-finding hesitation; reading comprehension reduced)

Lab & Imaging Reports:

- MRI Brain (Follow-Up): Moderate-to-severe bilateral hippocampal volume loss (MTA Grade 3), increased ventricular enlargement.
- Blood Tests: Routine metabolic panel, electrolytes, serum Vitamin B12 - Within normal limits.
- EEG: Moderate generalized background slowing in fronto-temporal regions consistent with progression.

Diagnosis:

Alzheimer's Disease (Moderate Stage, Active Progression).

Treatment Plan:

1. Medications: Increase Donepezil to 10mg daily at bedtime + Add Memantine 10mg daily morning (titrate to 20mg after 2 weeks).
2. Safety & Supervision: Full-time caregiver assistance recommended; install door sensors and safety locks.
3. Behavioral Care: Maintain calm environment during evening hours; avoid confronting memory confusion.
4. Follow-up: Neurological reassessment scheduled in 3-4 months.

Conclusion:

Follow-up examination confirms active disease progression over the 6-month period. Dual combination therapy (Donepezil + Memantine) has been initiated along with enhanced daily supervision to ensure patient safety and quality of life.

Doctor's Signature: Dr. A. K. Banerjee (MD, DM Neuro)
